SKIN CARE

WHAT IS PELLET THERAPY?

Pellet therapy is a procedure which consists of hormone replacement and provides an improvement to a woman's quality of life as she is undergoing menopause.

WHAT CAN I EXPECT IN A PELLET PROCEDURE?

During a pellet therapy procedure, testosterone pellets are inserted into the soft tissue. This procedure is minimally invasive. The implants release a steady dose of testosterone into your body's soft tissues over the course of 3-4 months.

WHAT IS THE PURPOSE OF PELLET THERAPY?

The purpose of pellet therapy is to alleviate menopause symptoms and hormonal imbalances.

HOW OFTEN WILL I NEED THIS PROCEDURE?

The therapy sessions for this procedure varies depending on each patient's hormone levels at the start of the therapy. In average, it's every 4-5 months.

WILL PELLET THERAPY WORK FOR ME?

Some symptoms that are treated with pellet therapy include:

- Low libido
- Weight gain
- Fatigue
- Endometriosis
- Loss of strength and muscle mass
- Poor bone density
- Insomnia
- Lack of motivation
- Uterine fibroids
- Depressed mood
- Severe PMS
- Menstrual migraine headaches
